ABS-ESD7

Electrostatic-Dissipative
FDM Thermoplastic Filament

The information presented are typical values intended for reference and comparison purposes only. They should not be used for design specifications or quality control purposes.
Overview

ABS-ESD™ (acrylonitrile butadiene styrene-electrostatic dissipative) is an ABS thermoplastic with static dissipative properties suited for static discharge-sensitive applications. ABS-ESD7 prevents static electricity buildup so it will not produce a discharge or attract other materials like powders, dust and fine particles.

The material is ideal for jigs and fixtures used to fabricate and assemble electronic components and associated production line and conveyor parts. It is also useful for producing functional prototypes, enclosures and packaging.

(1) Classic canisters are compatible with all Fortus 400mc and Fortus 900mc printers prior to s/n L502
(2) Plus canisters are compatible with all Fortus 450mc, all Stratasys F900, and Fortus 900mc printers s/n L502 and up
(3) Compatible with Fortus 380mc, Fortus 450mc, Stratasys F900 and Fortus 900mc
(4) Compatible with Stratasys F900 and Fortus 900mc
(5) Compatible with Fortus 450mc, Stratasys F900 and Fortus 900mc
(6) Compatible with Fortus 380mc
Physical Properties

Values are measured as printed. XY and XZ/ZX orientations were tested. For full details, refer to the Stratasys Materials Test Procedure on stratasys.com. DSC and TMA curves can be found in the Appendix.

Mechanical Properties

Samples were printed with 0.010 in. (0.254 mm) layer height.
For the full test procedure, please see the [Stratasys Materials Test Procedure on stratasys.com](https://www.stratasys.com).

**Print Orientation**
Parts created using FDM are anisotropic as a result of the printing process. Below is a reference of the different orientations used to characterize the material.

**Tensile Curves**
Due to the anisotropic nature of FDM, tensile curves look different depending on orientation. Below is a guide of the two types of curves seen when printing tensile samples and what reported values mean.

- **A** = Tensile at break, elongation at break (no yield point)
- **B** = Tensile at yield, elongation at yield
- **C** = Tensile at break, elongation at break

ESD Properties

ABS-ESD7 was tested per ANSI ESD S20.20, S11.11, STM11.12 to determine the effect that build parameters and part geometries have on ESD properties. Different geometries printed in different orientations fall into the ESD safe range (10^4 to 10^9 ohms), with some variability in thin-walled cylinders. For full details, see the ABS-ESD7 ESD White Paper.
